What's your plan?

Authors: Glenda King, Catherine Doherty, Christine Kelly, Jayne Armstrong, Julie Bray, Nicola Tikare, Patricia O'Kelly, Elizabeth Moore & Stephen Davidson

Background

- Advance Care Planning (ACP) is a way to think about and plan for your future. It covers personal, legal, clinical and financial affairs everything that is important to us. The Department of Health (DoH) policy document 'For Now and For the Future' supports normalising ACP conversations, increasing public awareness and supporting those adults who do want to create an ACP.
- The Neurology Unit (N.U) Musgrave Park Hospital (MPH) provides regional specialist Multidisciplinary Team (MDT) inpatient care for those with long-term progressive neurological conditions. By raising awareness of ACP amongst staff and Service Users (S.U), it will allow more individualised patient care, improving the quality of life of patients by focusing on what is important to them.

PRIMARY DRIVERS AIM SECONDARY DRIVERS By May 2024, >40% **Improve S.U awareness Education of S.U** of S.U that access of ACP the MPH N.U **Development of** Improve N.U staff inpatient services knowledge of ACP hence appropriate resources will have an confidence to raise awareness of awareness with S.U **Education of staff ACP**

CHANGE IDEAS

Development of a N.U ACP leaflet

S.U to be given the opportunity to access DoH ACP public messaging videos

N.U ACP noticeboard for resources and sign posting¹

Ensure >80% staff undertake ACP training and achieve minimum of Level 1 (as per ACP capability framework²)

PDSA 1: Data Collection Service User Awareness

The project aim for S.U ACP awareness was exceeded. Phase 1 median 42%. Phase 2 median 66%

PDSA 3: Service User Forum and Leaflet Production

Service User Focus Group Sessions

PPI involvement at ward level

BHSCT reader panel

ACP leaflet offered to everyone during admission

PDSA 2: Staff Training and Awareness

87% of surveyed staff achieved Level 1 ACP competency²

PDSA 4: Notice Board

Results

- 60 S.U agreed to take part in the ACP project. Of these **75%** wanted to discuss their ACP
- S.U awareness increased from 12% on admission to 77% on discharge.
- 84% of the MDT are now ACP trained
- 82% of surveyed staff rated their confidence to discuss ACP as ≥3 out of 5

Conclusion

ACP awareness has been successfully raised through a means of targeted education of S.U and the MDT. The results achieved by this project align with strategic priorities set out by the DoH¹ to support the implementation of ACP. Based on patient feedback, face to face ACP education supported by co-produced easily accessible resources, is the most effective way of raising awareness of ACP. This project has demonstrated the potential to be transformative, sustainable and transferable to other specialities and health care settings.

Next Steps

collaborative

working

ACP.

promoting

Education: Coproduction: continued

Mandatory ACP staff training and keep S.U resources up to date.

Embedding: Identify ACP ward champions to maintain momentum, sustainability and align with policy updates.

Expansion: Present project findings regionally and facilitate dissemination of improvement strategies to other clinical departments.
